

NOTHING LASTS FOREVER

Take some time out to read this flier

We are not protesting against you. Our protest is against the Scotts company.

Peat is a precious natural habitat for many rare plants and animals – we want to keep it that way. The peatlands like the one here at Thorne and Hatfield Moors have been around for hundreds of years – if peat digging continues it won't last much longer. If much more peat is taken it will never be able to recover to its natural state.

In the near future all UK peat will have been dug up. Shops like B&Q and Homebase have listened to public concerns and agreed to phase out selling peat altogether over the next few years. More and more gardeners have already switched to peat-free alternatives.

We don't want you to lose your jobs. Converting this factory to producing peat-free alternatives would create more jobs – jobs that have a long term- future, unlike the peat industry. We think it makes sense to switch to peat-free alternatives now while there is still a chance to save Thorne and Hatfield Moors.

We are here to send a message to Scotts. Meanwhile, have a break on us, sit back and relax.

Help us to protect the future of peatlands for everyone.
